NEW PUBLICATIONS.

METAPHYSICS: A STUDY OF FIRST PRINCIPLES.

By BORDEN P. BOWNE, Professor of Philosophy in
Boston University, and author of "Studies in
Theism." New-York: Harper & Brothers, 1882. The apprehension which has been felt during the

last three or four decades of years that the concentration of thought upon physical science would drive philosophy from the field, is proving groundless. This very study of nature, it is evdient, carries us back irresistibly to metaphysical problems. Not only is there a large admixture of philosophical ascumption and speculation in the writings of the coryphæi of natural sciences themselves, but in the system of Spencer we have an elaborate attempt to provide the modern interpreters of nature with a metaphysical creed. Sagacious observers have opined, moreover, that the materialistic wave would be met by a counter-wave from the opposite direction, and that the reaction would take the form of a more spiritual philosophy. The renewed interest in Berkeley, especially since Professor Fraser's critical biography, an interest in which the more speculative physicists have shared, is one symptom of a philosophical revival of the nature described. Professor Bowne's volume is a significant sign of the same character. The author's earliest work, the "Criticism of Spencer," showed him to be a keen critic, quick to detect the weak places in an adversary's armor, and unsparing in the exposure of them. His later work, the "Studies in Theism," the fruit of more mature reflection, and written in a more dignified tone, is a valuable contribution to the metaphysics of theology. In the volume before us we find a still greater advance in both the matter and manner of the discussion. The style is lucid and animated. Few books of the kind are so readable. The author is not on the watch against dulness. Dulness is so repellent to his nature that he has little occasion to guard against it. The sense of humor which may occasionally dictate utterances not consonant with the sobriety that old-tashioned teaders look for in a grave treatise on so elevated a subject, and which may in fact in passages transgress the carons of good taste, is not without its use as a shield against heaviness and prolixity, the besetting sins of metaphysical writers. It is surely a venial fault if the exuberant vigor which pervades the book now and then runs into a startling raciness; and a writer who evinces so remarkable powers of reasoning may be indulged, if not approved, when here and there he winds up a compact argument with a jest. Protessor Bowne avows himself a disciple of

Lotze, whose pupil he was, and to whom he dedicates his book. In fact, the division of the contents into three parts, Ontology, Cosmology and Psychology, is precisely that of Lotze's " Metaphysick ! Professor Bowne, however, is far from being a mere borrower. Whatever he may have learned has been thoroughly assimilated, and it is reproduced with all the order and freshness of a living conviction. There is character in the style. There is an independence in the tone,-a positiveness even which is at times slightly obtrusive. The author which is at times slightly obttosive. The many handles in themes as one who feels at home. The treatise, it may be said at the outset, is theroughly theistic. It is obvious that the current materialism and agnosticism are never left out of sight, even in the portions of the book where their tenets are not expressly combated. We know of no work of the same compass where the postulates and arguments of scientific materialism are subjected to a more searching and destructive criticism. Professor Bowne's general theory can only be stated here in its outlines. Pure being is only an abstraction; it is nothing real. The things which make up the world cannot be conceived of as possessed either of substance or quality, in the ordinary sense of the terms, Matter and force, the dual elements of being, according to modern science, are both irreducible and incompatible, if we adopt the notion generally entertained of matter. We can have no idea of what is meant by an inert core or lump of matter, destitute of force, nor of force as inbeing in it. The so-called primary qualities of matter are, like the secondary, relative to the percipient subject. Perception is of phenomena. Impenetrability stands on the same footing, in this regard, as color and taste. We know through reason exercising its own function on the basis of perception, but through its inherent laws which correspond to the nature of things. We experience only the activities exerted upon us by outward things. These act upon us, and interact among themselves. We know things only as centres of activity. Activity takes the place of attribute. These activities dependent in common on a unitary world-ground, the conditioning source of their policy were and to be generally to the high the experience only the activities exerted upon us by outward things. These act upon us, and interact among themselves a conditioning source of their being. We are this adequate the conditioning source of their being. We are this dependent in common on a unitary world-ground, the conditioni handles his themes as one who feels at home. The treatise, it may be said at the outset, is thoroughly dependent in common on a unitary world-ground the conditioning source of their being. We are thus brought back necessarily to the Infinite; and the Infinite is an agent in whom is the origin of the flowing activities, which constitute the objects of perception. The infinite agent is personal and free. Unity in the Infinite is incompatible with necessity.

Mind is as real in the cosmos as in man. The evidences of mind in the world are as clear and undeniable as the evidences of mind in our fellowmen, to whom we attribute intelligence and purpose. If things have in themselves no substitution of being, no substantiality distinct from the Infinite Author in whom they subsist, the same is not true of our own minds. These are known to us as substantial entities, and not as mere activities of the Infinite One from whom they derive their existence. Every theory of consciousness which calls in question the unity and substantiality of the finite spirit, whether that theory emanate from Pantheism or Empiricism, from Spinoza or from Hume, is both self-contradictory and in conflict with irrefutable evidence. Every such theory must land in scep tieism and thus perish by suicide. Activity is from within. As among things force is not, strictly speaking, propagated or transmitted-this is not the meaning of conservation-but is simply evoked on the condition of an inscrutable interaction, so it is with the operation of mind. Even in sensation more evidently in perception, still more plainly in reasoning and the higher exercises of intellige the mind is the active producer of its own states We know the world outside of us because the world is natural, and we can re-think the thoughts of

Empiricism is the direct antipode of the truth. But if things, according to Professor Bowne, are not substantial, what is space? Space, we are told, as commonly conceived, has no objective reality. Yet the author does not adopt Kant's view that space is exclusively a form or framework of sense-perception. Space, he holds, like the manifestations of matter in general, is relative and phenomenal. It is an effect in consciousness of a certain interaction of things, which, as it is in itself, is inscrutable. Space is one of the ways in which the activities without affect us. Motion, if it signify a change of place, is equally unreal; it is only another name for change. In keeping with this semi-idealistic theory of space is the author's notion of time. Time is the subjective impression evoked by change in things external. It is under the form of temporal succession—of before and after -that we recognize change and motion. But time has no reality for the Infinite so far as He is changeless; i. e. so far as His own " self-consciousness and self-possession" are concerned. He is in a sphere which transcends the conditions and the sphere of time. With Him there is no past or future. But the activity of God as the founder and conductor of the world-process is a temporal one, since this process is a developing and changing one. There is sequence in His action and knowledge. In a word, time has no existence apart from the changes of finite being. "The members of a spaceseries can coexist; the members of a time-series are mutually exclusive." "The objective fact is being passing from state to state; and these states are mutually exclusive. Change does not, indeed, require time; but it results in a new state, which excludes and hence succeeds its predecessor." "In the common thought time exists as a precondition of change; in our view change is first and time is but its form." "The rate of change is the rate of time; and the cessation of change would be the cessation of time." To be real in being and to be present in time mean exactly the same thing.

God which are presented to us as in a writing

It might be supposed that Professor Bowne, insisting as he does on the a priori origin of the categories,

-space, time, cause, etc.—and contending for a doctrine of sense-perception in which so much is handed over to subjectivity, would take his stand on idealism pure and simple. Such, however, is not his position. He acknowledges that there is no possibility or proving that there is an external world. But we must believe that our fellow-men exist. To deny or doubt this, he tells us, is to reduce philosophy to a farce. But they are external to us. If human persons are realities distinct from ourselves, and not mere dreams, there is nothing gained by denying the objective reality of the world-process which passes before us, even though we are compelled by analysis to correct to a surprising degree the views taken of it by uncritical common sense. We must either assume that there are objects of sense-perception, or hold that our intellectual nature is an instrument of delusion. We are precluded on ethical grounds from departing so far from common sense as subjective idealism would oblige us to go. It is on ethical grounds, according to Professor Bowne, that our trust in our intellectual faculties is ultimately founded. Unless these are veracious, it is vain to affirm or deny anything. There is no guarantee of their veracity apart from the trustworthiness of the Creator.

Professor Bowne objects, then, that the Berkeleian doctrine is too wide a regress from the common sense beliefs of men. That doctrine is that only spirits exist, and that the world which we seem to ee is only a world-vision which the Deity, by a uniform and regular operation of His will, evokes in the finite minds to whom He has given being. The Berkeleian might be disposed to dispute the proposition that his view of things is at a much wider remove from the vulgar apprehension than the objective idealism which Professor Bowne would substitute for it. But, waiving this point, what, we may ask, is Professor Bowne's conception? How shall we understand him? The world, we are told, is more than the divine ideas, more than thoughts of the Infinite. These thoughts are set in reality. Matter and all its laws are the divine purpose in cessantly realizing itself. If we inquire into the meaning of these phrases, it is explained that there is not only a conception of the world in the divine mind, but an energizing of God, "flowing activities of the Infinite," which imply an exertion of will on His part, and such an exertion of will as constitutes an object, whether the perceiving mind of the creature exist or not. God does not evoke in each individual a world-vision corresponding to the divine ideas, but His energizing contains in it something perceptible, wherever unite minds exist to perceive it. But what that something is, whereby Professor Bowne's theory differentiates itself from that of Berkeley, is not made clear. The distinction between objective idealism in this form and the idealsm of Berkeley, is rather tenuous. Certainly it is not broad enough to give to either of the two views much advantage in an appeal to uneducated

It can hardly be deemed a reproach to the author of this work if he succeeds less in the positive than in the negative part of his undertaking. The following passage will afford an example of the force of his reasoning in opposition to the empirical

on its own account—that is, a priori. This a priori character of rational truth however, does not consist in its being universally or easily known, but in the fact that, when known, the mind accepts it on its own warrant.

The criterion of a prior; truth is found in its self-evident character. Insight is the touchstone of its validity. The distinction between the causes and the grounds of belief Professor Bowne insists or with commendable urgency. Many writers of the empirical schools content themselves with an explication of the genesis of knowledge, which, be that genesis true or false, does not or itself determine the question of its trust worthines

We have only to add that the work of Professor Bowne is marked by a striking freshness and Bowne is marked by a striking freshess and ability, a comprehensive mastery of the history of philosophy from the beginnings of speculation, a penetrating knowledge of recent discussions in this department, and an uncommon power of presenting abstruse trains of thought in a perspicuous and lively form. It will take a high rank in the philosophical literature of the time.

MINES AND MINING.

MONDAY, April 17-P. M The mining stock markets to-day were fairly active, but the final changes except for two or three stocks are unimportant. South Pacific, after opening at 1.25, sold down to and closed at 1. Robinson was steady at about 3 and closed unchanged from Saturday at 3.05. Chrysolite rose to 512, but closed at 518, and Amie, after sales at 35, was unchanged at 34 cents. State Line 2 and 3 recovered from 64 to 68-2067 cents, and 1 and 4 was 1 cent higher at 16 cents. Silver Cliff again declined to 1.10 and Little Chief was weak at 90 cents. The Comstocks were moderately dealt in and for the higher-priced stocks figures were steady, but Consolidated Virginia was 5 cents lower at 68 cents, and Sutro Tunnel declined to 60 cents.

SALES AT THE MINING EXCHANGES.

INY TELEGRAPH TO THE TRIBUNE.]

Tomestone, Ariz., April 17.—The Flora Morrison shaft is 632 feet deep. The winze from the 530 level is down 100 feet, showing high grade ore.

The machinery on the Tombstone new combination shaft will be finished and running to-day. The shaft is down 120 feet, 40 feet being in ore.

The Grand Central mine is shipping the usual quantity of ore, all from the 500 level.

The Gensight mine, Mule Mountara, has struck a body of \$300 ore. The Blue Stone Reduction Works are negotiating for the ore.

An order of \$7,500 for one-quarter of the Last Chauce mine, Turquoise District, by George Hearst, of San Francisco, has been refused.

The ore in the Old Guard mine is increasing in richness, averaging over \$100 on a four-foot vein.

The Ingersoil mine is looking well. Three hundred tons of ore have already been milled.

Deadwood, Dak, T., April 17.—The Oro Fino

DEADWOOD, Dak, T., April 17.—The Oro Fine clean-up, after an eight days' rin, was \$1,400. The Sitting Bull smelter will start up this week. The heavy snow storm of the past week assures in abundance of water for milling and hydraulic

purposes.

The Caledonia shaft and winze are going down a foot and a half per day. Both are in a fine body The Grand Junction is running on four-dollar ore.

BATTLE MOUNTAIN, Nev., April 17.—The Morning Star Company has 70 tons of ore at the mill, which is expected to start up on the 1st of May.

The Betty O'Neal Company is stoping about four tons of ore daily.

The Chloride tunnel is in ledge matter.

The Eagle contractors are pushing the lower tunnel.

The Eureka Consolidated Mining Company has declared its dividend No. 72, of 50 cents per share, payable April 27 at the office of Laidlaw & Co. No. 14 Wall-st. Transfer books will close on April 18. Bullion valued at \$79,000 was received in this city yesterday from the mines.

Robinson Consolidated manager telegraphed April 46: "Shipped for two days 81 tons; assay 53 onnces. Started 1,100-foot level drift to-day. Contracted it at \$5 per foot. Will increase shipments to 60 tons. One-thousand-foot level opening up good. The body of ore is increasing in width and thickness." The New-York office of the Rob-Company yesterday received from the mine

Father de Smet superintendent reports that the result of the run of the mill for thirteen days ending March 29 was 1,345,92 ounces, and that most derground reserves being kept tack

Instruction.

For Boys and Young Men-City. NEW-YORK MILITARY ACADEMY. FORT WASHINGTON, N. Y.

Superintendent-JOHN B. HAYS, M. D.,

SUMMER SESSION begins June 15. A Bearding School of the highest grade, whose three-fold cad, and scruppinessly followed, is to mould, at an early ago, the intellect of youth by science, the will by obedieses, and the feelings by religion; never separating these three great requisitor, instruction, discipline, religion, while fitting for the feelings by receiving discipline, religion, while access requisites in Mashington Heights, about ten miles up the Sixth access the Hudson, it is reached by the Sixth Avenue Elevated Road to 155th-st. Carriages are always in waiting, or, by timely notification, the superintendent meets the arrival of any train. A more heautiful and nealthy place—on an eminence commanding the most delightful seemey—or more attractive surmoundings, are not found along the far famed banks of the Hudson. Its buildings are unusually homelike.

There are forty acres of land attached to it, shaded, and intersected by oak groves, affording ample space for play-grounds.

French, German and Spanish spoken.

The chief engineers of last Friday's and Saturday's upward turn in prices at the Stock Exchange to-day put forth a feeble effort to give the market a steady opening, and it was so far successful that immediately following first prices (which in only few instances were varied more than 4 per cent from Saturday's last), there was a short-lived rally of from 14 to 34 per cent. After that, followed the inevitable result of all attempts to advance prices in a demoralized market for the sole purpose of making immediate sales. Real holders of stocks paid little attention to the manipulation, and plied the market so freely that nothing less than a persistent buying could stem the tide. The market was a curious one all day. Declines of 192 34 per cent were followed by reactions of 14 a 12 per cent, almost with the regularity that Trinity's bell announces the passing of each quarter-hour. Among the specially interesting features of the day was the delivery of 17,000 shares of Central and Hudson stock, which until recently had been long owned by a person closely allied with the Vander-bilt family. The stock was not delivered before be-cause until to-day the company's transfer books have been closed since March 20. The delivery of

TEACHERS wanted for numerous early spring and fail vacancies daily received. Send stamp for application form to National Teachers' Agency, Cucinnati, Ohio a borrowing demand for that quantity— TEACHERS, TUTORS and GOVERNESSES
furnished to Principals and Families.
Teachers supplied with positions.
